I. INTRODUCTION

The Afghanistan Nationwide Quarterly Research (ANQAR) survey was designed to gain a broader understanding of the attitudes, behaviors, and issues that are important to the people of Afghanistan. This report reviews the methodology of the Wave 38 survey conducted in the early autumn of 2017.

Fieldwork for Wave 38 was conducted by ACSOR for RS/NATO in Afghanistan from November 6-18, 2017. The sample includes a national probability sample of 11,005 Afghans selected at random in all 34 of the country's provinces; and a sample conducted via intercept interviews of 2,234. Respondents were 18 years and older, 64% were male and 36% were female. The survey includes both urban (25%) and rural (75%) households. Unless otherwise noted, all figures in this report represent unweighted results.

Executive Summary

The sampling methodology, questionnaire design, field team, and overall field experience are summarized in this report.

- Fieldwork was conducted from November 6-18, 2017. The field team consisted of 1101 trained interviews and supervisors under the management of D3 Systems and ACSOR.
- ANQAR Wave 38 includes a total sample of 13,239 men and women 18 years of age and older in all 34 provinces of Afghanistan. 11,005 interviews were conducted via random walk with male and female respondents and 2,234 interviews were conducted via intercept interviews with males in areas where security or weather restricted random selection interviewing. A full list of the locations for the intercept interviews can be found in Appendix A.
- The sample was stratified by province and urban/rural status using population data released by the Central Statistics Office (2016 - 2017 estimates) of Afghanistan. Additional booster sampling points were distributed to smaller provinces to ensure that the minimum sample size per province was at least 110 interviews. Booster sampling points were distributed in Panjshayr, Nuristan and Nimroz.
- Replacement draws within the same district originally selected were provided to the field

team prior to the launch of fieldwork. In the case when the replacements were exhausted, settlement/nahia level replacements were done in field by supervisors where neighboring accessible settlements were chosen as replacements whenever possible. A full list of the Wave 38 replacements can be found in Appendix B.

- The sample was 64% male and 36% female. The survey was designed to include 50% male and 50% female respondents, but due to violence, transportation conditions, and local norms female interviewers could not travel to some selected districts. Sampling points that were planned for interviews with women and could not be covered by female interviewers were replaced with male interviews in the same village.
- The questionnaire consisted of 31 management questions, 18 demographics questions, and 109 substantive questions. Topics included quality of life, security, perceptions of the government, reconciliation, and migration.
- The mean interview length was 33 minutes with a range of 20 to 60 minutes.
- Various quality control procedures were employed throughout the project. During field, interviewers were observed by supervisors. Field supervisors also conducted back-checks of interviews. During the data processing phase, a proprietary program, Hunter, was used to search for patterns or anomalies in the data that may indicate an interview was not properly conducted by an interviewer. For the Wave 38 survey, a total of 537 cases were removed from the dataset; 526 cases were removed for being over 95% similar in substantive responses, 8 cases were removed due to similarities in answers, and 3 cases was removed for having over 50% don't know or refusal responses.
- The data were also screened for keypunching errors. ACSOR randomly selected 10% of the survey's questionnaires for double entry. The double punched questionnaires were compared to the originally punched questionnaires. Discrepancies between the two were rectified and the final data files were based strictly on a review of the original questionnaires. The overall error rate for the Wave 38 survey was .06%. The error rate was very low overall and we have confidence in the fidelity of the keypunched data.
- The Wave 38 survey has a margin of sampling error of ± 0.85 percentage points at the 95 percent confidence level. The overall design effect is 2.07. The complex margin of error is $\pm 1.23\%$.

- For the overall sample, the response rate is 85.41%, the cooperation rate is 95.40%, the refusal rate is 2.79%, and the contact rate is 89.53%.

Project Schedule

Table 1 lists the schedule of major project milestones.

TABLE 1: PROJECT TIMELINE

Project Phases	Start Date	End Date
Translation	25 th Oct 2017	3 th Nov 2017
Central Briefing	4 th Nov 2017	4 th Nov 2017
Field	6 th Nov 2017	18 th Nov 2017
Quality Control during field-work	6 th Nov 2017	18 th Nov 2017
Data Processing	16 th Nov 2017	25 th Nov 2017

II. SAMPLE DESIGN

The sample was drawn using a stratified multi-stage cluster design. D3 used the 2016-2017¹ updated figures provided by the Central Statistics Office (CSO) of the Afghan government. D3 chooses to use this because, similar to the 2010- 2011 update, much of the 2016-2017 update is based on data drawn from the Ministry of Rural Reconstruction and Development relying on results from the National Reconstruction Vulnerability Assessment (NRVA) based on a detailed cataloging of households to help inform the updates in a systematic, replicable way. While the proportions by provinces have changed in mostly a uniform, formulaic manner, the additional use of NRVA data adds to the detail of the estimates.

Sampling Methodology

The target population for this survey was a nation-wide poll of Afghans age 18+.

1. Step 1: Primary sampling units (PSU) were allocated across all of Afghanistan's 34 provinces using proportional stratification. Urban/rural status and province serve as the strata. In field, villages were considered rural while towns, cities and metros were considered urban. Settlements or neighborhoods within randomly selected districts were chosen by simple random sampling.
 - a. Booster interviews (n=88) were added to small provinces to ensure that the minimum sample size per province was at least 110 interviews. Booster interviews were add in Panjshayr (n= 32), Nuristan (n=32) and Nimroz (n=24).
2. Step 2: **Districts** were selected via *probability proportional to size (PPS) systematic sampling*. Districts serve as the primary sampling unit (PSU).

¹ There is no official census of Afghanistan. The Central Statistics Office (CSO) of the Afghan government has attempted to provide updates since 2003, but their base is influenced by figures from the 1979 census. The CSO has received support from the UN, the Ministry of Rural Reconstruction and Development, and the World Food Programme to issue updates. D3 completed its review of 2015-2016 updates from the CSO and feels they are acceptable as replacements for the 2006 estimates.

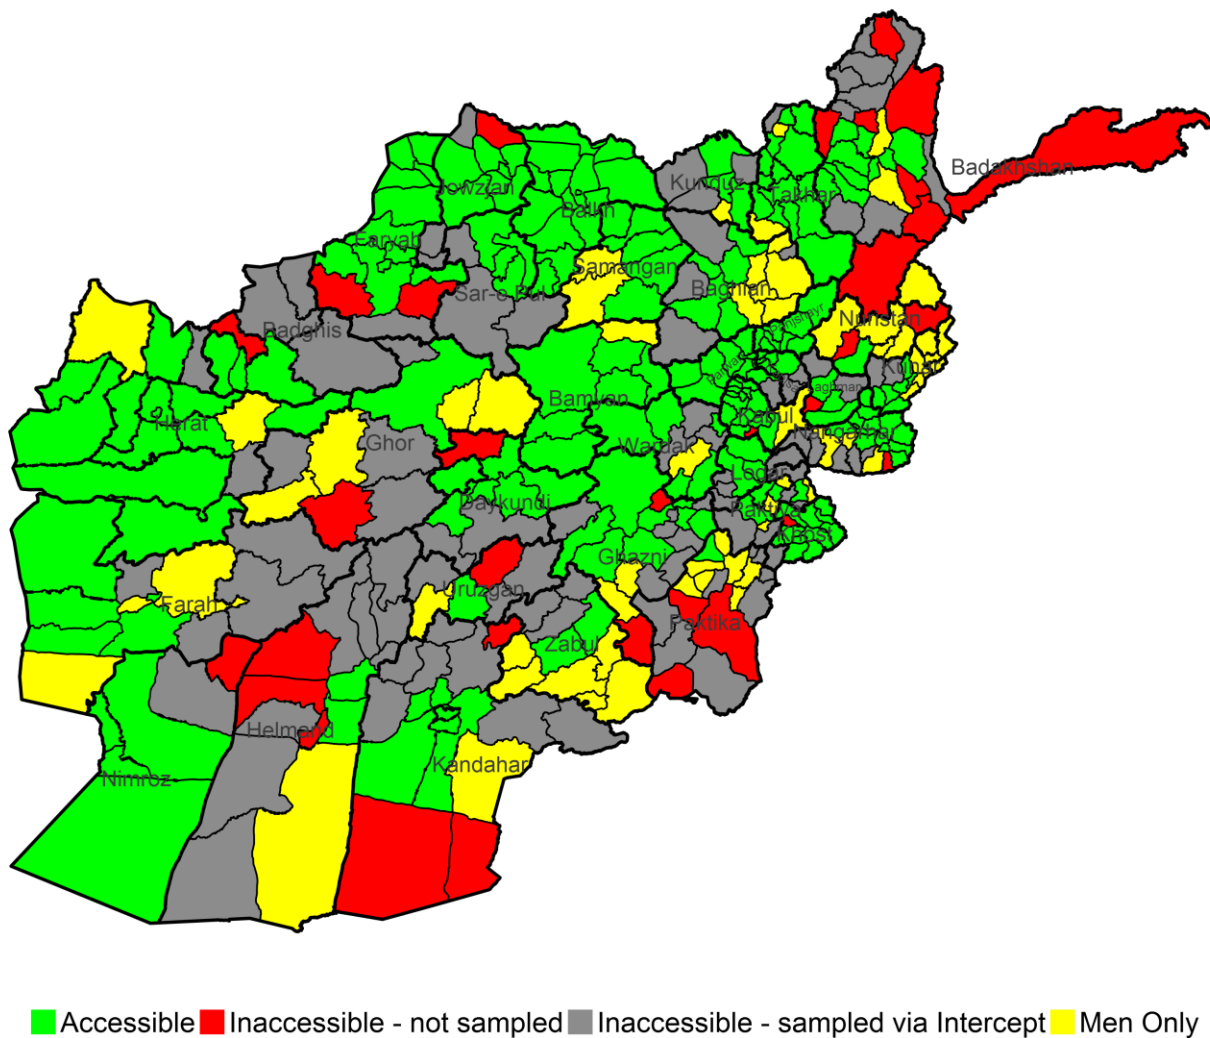

In situations where the selected district was inaccessible due to security, transportation, weather, or other reasons, another district within the province was randomly selected:

- a. In situations where the selected district was inaccessible due to security, transportation or weather, intercept interviews were conducted with residents of those districts who were traveling in neighboring districts. Intercept interviews were used in 322 sampling points. These were conducted with male respondents only². A list of the intercept interviews can be found in Appendix A.

² Andar district in Ghazni is a unique PSU, where half of the sample originally allocated was converted to intercept interviews. This was done because only settlements near the city center of Andar were accessible at the time of the survey.

The following figure illustrates the accessibility assessment during the month of August, when field work launched. Red districts were not sampled and are completely inaccessible, yellow are accessible to males only, green are completely accessible (to both male and female interviewers), and gray are intercept interviews which targeted completely inaccessible districts that were visited during Wave 37.

FIGURE 1: AFGHANISTAN ACCESSIBILITY WITH INTERCEPT INTERVIEWS

Of the 424³ potential primary sampling units in the country, 19% were inaccessible to male interviewers, 30% were inaccessible for female interviewers. Overall, 132 completely inaccessible districts were sampled. These were made accessible to male interviewers by intercept interviews. Including design effects, results have a complex margin of sampling error of +/- 1.29 percentage points at the 95 percent confidence level for the full sample.

3. Step 3: Selected PSU that were completely accessible were divided into two sampling points of 8: one female and one male. This was done to allow for gender matched interviewing due to cultural constraints and to also obtain a greater geographical coverage within district, and therefore overall.

The **settlements**, within districts, were selected by simple random sampling for each of the two points. Within urban strata, we used neighborhoods (called “nahias” from cities and metros) and towns while in rural strata we used villages. As population data for settlement sizes does not exist, a simple random selection amongst all known settlements was used to select locations. The settlement/nahia served as the secondary sampling unit (SSU).

- a. Transportation constraints due to bad weather, and instability and frequent fighting in some provinces can cause a sampling point to be adjusted or replaced to keep interviewers out of areas that may be unsafe.
 - b. Replicate draws were provided to the field team prior to the launch of fieldwork. In the case when the replacements were exhausted, settlement/nahia level replacements were done in field by supervisors where neighboring accessible settlements were chosen as replacements whenever possible.
 - c. At the settlement level, 237 of the 1723 sampling points were randomly replaced within the same districts because of security reasons, 194 for transportation difficulties, 35 because they could not be located, and 11 for other accessibility issues. A complete list of replaced sampling points and reasons for replacements can be found in Appendix B.
4. Step 4: Field managers then used maps generated from several sources to select starting points within each SSU.

³ There are 408 districts in Afghanistan; however Kabul City is composed of 16 nahias leading to 424 primary sampling units used in the survey's sampling frame.

- a. In rural areas, we used a system that requires interviewers to start in one of five randomly selected locations (Northern, Southern, Eastern, or Western edges of the rural settlement and Center).

- b. In urban areas, because it is more difficult to differentiate neighborhood borders, a random location (Northern, Southern, Eastern, Western or Center) was provided to the interviewer, and they started from an identifiable landmark in the vicinity (ex: school, Mosque, etc.)
5. Step 5 - A **random walk method** with a fixed sampling interval was performed from the starting point. For example, selecting every third house on the right in rural areas and every fifth house on the right in urban areas.
6. Step 6: After selecting a household, interviewers were instructed to utilize a **Kish grid** for randomizing the target respondent⁴ within the household. Members of the household were listed with their names and their age in descending order and then the respondent was selected according to the rules of the Kish grid.

TABLE 2: PROVINCIAL POPULATION PERCENTAGE, UNWEIGHTED AND WEIGHTED PERCENTAGE

Province	CSO Percentage in Population (Total)	Percentage in Unweighted Sample (Total)	Percentage in Weighted Sample (wgt1) ⁵
Kabul (KAB)	16.1%	16.8%	16.6%
Kapisa (KAP)	1.6%	1.7%	1.6%
Parwan (PAR)	2.5%	2.1%	2.4%
Wardak (WAR)	2.2%	2.0%	2.2%
Logar (LOW)	1.4%	1.4%	1.4%
Ghazni (GHA)	4.5%	4.6%	4.5%
Paktiya (PIA)	2.0%	2.1%	2.0%
Paktika (PKA)	1.6%	1.7%	1.6%
Khost (KHO)	2.1%	2.2%	2.1%
Nangarhar (NAN)	5.6%	5.3%	5.6%

⁴ Interviewers are not allowed to substitute an alternate member of a household for the respondent selected by the Kish grid. If the respondent refused to participate or was not available after callbacks, then the interviewer must move on to the next household according to the random route.

⁵ 'wgt1' variable in the data set.

Province	CSO Percentage in Population (Total)	Percentage in Unweighted Sample (Total)	Percentage in Weighted Sample (wgt1) ⁵
Laghman (LAG)	1.6%	1.7%	1.6%
Kunar (KNR)	1.7%	1.7%	1.7%
Nuristan (NUR)	0.5%	.8%	.5%
Badakhshan (BDS)	3.5%	3.6%	3.5%
Takhar (TAK)	3.6%	3.7%	3.6%
Baghlan (BGL)	3.4%	3.3%	3.3%
Kunduz (KDZ)	3.7%	3.8%	3.7%
Balkh (BAL)	4.9%	4.0%	4.9%
Samangan (SAM)	1.4%	1.5%	1.4%
Jawzjan (JOW)	2.0%	2.0%	2.0%
Sar-e- Pul (SAR)	2.1%	1.7%	2.1%
Faryab (FYB)	3.7%	3.5%	3.7%
Badghis (BDG)	1.8%	1.8%	1.8%
Herat (HER)	7.0%	7.0%	7.0%
Farah (FRA)	1.9%	1.9%	1.9%
Nimroz (NIM)	0.6%	.8%	.6%
Helmand (HEL)	3.4%	3.4%	3.4%
Kandahar (KAN)	4.5%	4.7%	4.5%
Zabul (ZAB)	1.1%	1.1%	1.1%
Uruzgan (ORU)	1.4%	1.3%	1.3%
Ghor (GHO)	2.5%	2.6%	2.5%
Bamyan (BAM)	1.7%	1.7%	1.6%
Panjshayr (PAN)	0.6%	.8%	.6%
Daykundi (DAY)	1.6%	1.7%	1.7%
Total	100%	100%	100%

Weighting

The dataset includes two weights.

1. “wgt 1” is a post-stratification adjustment performed to match the population’s geographic distribution of Afghanistan. The only target used for this post stratification was Province by Urban/Rural status.
2. “wgt 2” is the same as wgt 1 except intercept interviews are not included in the calculations. The use of this weight effectively removes intercepts from the sample allowing for analysis of all interviews collected using random probability sampling methods.

Margin of Sampling Error and Design Effect

Given that the methodology for this survey is assumed to be a full probability-based sample, weighted data can be used to estimate variance for each statistic. These, in turn, can be used to estimate a design effect for the survey and then to estimate the complex margin of sampling error. Design effect estimates provided in this section account for both the complex sample design as well as the weights.

- The design was stratified by urbanity and province and then clustered by district and settlement.
- The design effect is estimated for five variables Q1, Q2, Q3, Q4 and Q5. In the following tables, we provide design effect estimates for each response category of the key variable through the *survey* package in R.
- In an effort to provide a survey-wide design effect, a “weighted mean” design effect is calculated as average across each response category of the variable when weighted by frequency of response which is then in turn averaged across all five variables.

TABLE 3: DESIGN EFFECT ESTIMATION USING Q1, Q2, Q3, Q4, Q5

q1: Q181 Generally speaking, do you believe the Government of Afghanistan is going in the right direction, the wrong direction, or is in the same place, not going anywhere?

	Frequency	Proportion	Complex SE	Design Effect
Right Direction	3940	29.76%	0.61%	2.37
Wrong Direction	6089	45.99%	0.64%	2.22
Same Place, Not Going Anywhere	3065	23.15%	0.51%	1.92
Refused (vol.)	5	0.04%	0.02%	1.04
Don't Know (vol.)	139	1.05%	0.12%	1.96
Weighted Mean			0.60%	2.19
Total	13238	100.00%		

q2: Q280 How satisfied or dissatisfied are you with the current quality of your life? Are you very satisfied, somewhat satisfied, somewhat dissatisfied, or very dissatisfied?

	Frequency	Proportion	Complex SE	Design Effect
Not Satisfied At All	1365	10.31%	0.38%	2.06
Somewhat Dissatisfied	3677	27.77%	0.54%	1.91
Somewhat Satisfied	5825	44.00%	0.60%	1.96
Very Satisfied	2319	17.52%	0.49%	2.18
Refused (vol.)	6	0.05%	0.04%	3.44
Don't Know (vol.)	47	0.35%	0.06%	1.36
Weighted Mean			0.54%	1.99
Total	13239	100.00%		

q3: Q23 Do you believe that the next generation of Afghans (in 10-15 years) will be able to live in peace and security? Do you think it is very likely, likely, not likely, or not likely at all?

	Frequency	Proportion	Complex SE	Design Effect
Not Likely At All	1271	9.60%	0.33%	1.71
Not Likely	3851	29.09%	0.58%	2.19
Likely	5902	44.58%	0.58%	1.82
Very Likely	1903	14.38%	0.44%	2.08
Refused (vol.)	10	0.07%	0.02%	0.99
Don't Know (vol.)	302	2.28%	0.19%	2.07
Weighted Mean			0.53%	1.96
Total	13239	100.00%		

q4: Q337 How would you describe the economy for you and your community since 5 years ago? Have things gotten better, gotten worse or remained the same?

	Frequency	Proportion	Complex SE	Design Effect
Gotten Better	3376	25.50%	0.59%	2.44
Gotten Worse	5689	42.97%	0.64%	2.20
Remained The Same	4109	31.03%	0.57%	2.02
Don't Know (vol.)	65	0.49%	0.07%	1.20
Weighted Mean			0.60%	2.20
Total	13239	100.00%		

q5: Q289 Has your family's economic situation gotten better, gotten worse or stayed the same compared to 12 months ago?

	Frequency	Proportion	Complex SE	Design Effect
Gotten Worse	5152	38.91%	0.61%	2.10
Stayed The Same	5181	39.13%	0.58%	1.89
Gotten Better	2861	21.61%	0.53%	2.18
Refused (vol.)	4	0.03%	0.02%	1.02
Don't Know (vol.)	41	0.31%	0.06%	1.36
Weighted Mean			0.58%	2.04
Total	13239	100.00%		

A survey wide design effect and margin of error is calculated as the average design effect across these five variables. The survey wide design effect is 2.07.

Assuming simple random sample with $n=13,238$, $p=.5$, at the 95% CI level, a conservative estimate of the margin of error for the survey is 0.85%.

Accounting for the complex design through the design effect estimate of 2.07, $p=.5$ at the 95% CI level, the complex margin of error (CMOE) is 1.23%.

Design effect estimates were also calculated at the provincial level. Detailed calculations can be located in the document titled *ANQAR W38 CMOE Provincial v1* and a summary of the provincial level design effects and complex margin of error can be found in the document titled *ANQAR W38 DEFF Summary v1*.

III. FIELD IMPLEMENTATION

The following section reviews the contact procedures, the sample disposition and field outcomes.

Contact Procedures

After selecting a household, interviewers were instructed to utilize a Kish grid for randomizing the target respondent within the household. Members of the household were listed with their names and age in descending order. The Kish grid provides a random selection criteria based on which visit the household represents in his or her random walk and the number of inhabitants living in the household.

Under no circumstances were interviewers allowed to substitute an alternate member of a household for the selected respondent. If the respondent refused to participate or was not available after three call-backs, the interviewer then moved on to the next household according to the random walk.

Typically interviewers were required to make two call-backs before replacing the household. These call-backs are made at different times of the same day or on different days of the field period, in order to provide a broader schedule in which to engage the respondent. Due to security-related concerns, the field force has had difficulty meeting the requirement of two call-backs prior to substitution in many rural areas.

In this survey, while interviewers were able to complete some call-backs, the majority of the interviews were completed on the first attempt:

- First contact: 98.8%
- Second contact: 1.0%
- Third contact: .3%

Sample Disposition

This section describes the sample disposition which is another diagnostic tool to understand the validity of the sample. Final disposition codes, call outcome rates, and response rates contribute to an understanding of the presence of potential survey error.

This section contains:

- A detailed and comprehensive set of survey dispositions recoded into the six major types of American Association of Public Opinion Research (AAPOR) survey case dispositions.
- The formulas for calculating response rates, cooperation rates, and contact rates.
- A report of the final outcome rates for the evaluation of this survey according to the AAPOR Standards for Minimal Disclosure requirements (Part III of the Code of Professional Ethics and Practices).

Rate Calculations

The American Association of Public Opinion Researchers (AAPOR) publishes four different types of rate calculations used in AAPOR reporting (response rates, contact rates, cooperation rates, and refusal rates). D3 and ACSOR use AAPOR's Response Rate 3, Cooperation Rate 1, Refusal Rate 2, and Contact Rate 2 as their standards. Intercept interviews are treated the same as standard interviews for the purposes of calculating response rates.

Acronyms used in the formulas are below:

I	=	Complete Interview
P	=	Partial Interview
R	=	Refusal and break-off
NC	=	Non-contact
O	=	Other
UH	=	Unknown if household/occupied household unit
UO	=	Unknown, other
e	=	Estimated proportion of cases of unknown eligibility that are eligible

Response Rate 3= _____ I _____

$$(I + P) + (R + NC + O) + e (UH + UO)$$

Cooperation Rate 1= _____ I _____

$$(I + P) + R$$

Refusal Rate 2= _____ R _____

$$(I + P) + (R + NC + O) + e (UH + UO)$$

Contact Rate 2= _____ (I + P) + R + O _____

$$(I + P) + R + O + NC + e (UH + UO)$$

Final Disposition Codes

The survey cases are divided into six main types of AAPOR disposition groups: completed interviews, partial interviews, cases of unknown eligibility, non-contacts, refusals, and cases of ineligible interviews. Table 4 provides the final disposition classifications.

TABLE 4: INTERVIEW STATUS: FINAL DISPOSITION CODES AND DEFINITIONS

ACSOR Code	AAPOR Code	Description	Totals
Completed Interviews			
1	1.0/1.10	Interview was successfully completed	13784
Partial Interviews			
10	1.200	During interview, selected respondent refused (General)	40
11	1.200	During interview, selected respondent was not feeling informed to answer the questions	27
12	1.200	During interview, selected respondent got angry because of a question	7
13	1.200	During interview, selected respondent preferred head of household be interviewed	18
14	1.200	During interview, selected respondent was in a hurry/no time	31
Total Partial			123
Unknown Eligibility			
20	3.130	No answer at door	359
21	3.200	No adults (18+) after three visits	377
22	3.170	Unable to access building or house	81
23	3.210	Outright refusal at the door	497
Total Unknown Household			1314
Non-contacts			
24	2.210	Selected respondent never available for interview	103
25	2.250	Selected respondent long-term absence for the fieldwork period	292
Total Non-contacts			395
Others			
26	2.300	Selected respondent not allowed to participate in the survey	60
35	2.310	Selected respondent deceased	0
36	2.320	Selected respondent physically or mentally unable to complete the interview	25

ACSOR Code	AAPOR Code	Description	Totals
37	2.332	Selected respondent unable to complete interview in languages available	5
90	4.900	Other	90
Total Others			
Refusals			180
30	2.11	Selected respondent refuses (General)	67
31	2.11	Selected respondent not feeling informed to answer the questions	28
32	2.11	Selected respondent got angry because of the subject matter	85
33	2.11	Selected respondent prefers head of household to be interviewed	91
34	2.11	Selected respondent in a hurry/no time	451
Total Refusals			
Not Eligible			
40	4.700	Does not meet screening criteria/not eligible for interview	190
41	4.500	Non-residential (business)/abandoned home	233
Total Not Eligible			16390
Total	Total Sampled Households		13784

The response rate is the number of complete interviews divided by the number of interviews plus the number of non-interviews plus all cases of unknown eligibility. The cooperation rate is the proportion of all cases interviewed of all eligible participants ever contacted. The refusal rate is the proportion of all cases in which a participant refuses to do an interview, or breaks-off an interview of all potentially eligible cases. The contact rate measures the proportion of all cases in which the participant responsible and associated with the provided phone number was reached by the survey. Table 5 provides the following outcome rates for the survey: the response rate, cooperation rate, refusal rate, and contact rate.⁶

⁶ D3 uses the rates published by AAPOR; citation is: The American Association for Public Opinion Research. 2009. *Standard Definitions: Final Dispositions of Case Codes and Outcome Rates for Survey*. 6th edition.

TABLE 5: FORMULAS AND RATES⁷

Disposition Rate Formulas	Percent
Response Rate 3 (RR): $I / ((I+P) + (R+NC+O) + e*(UH+UO))$	85.41%
Cooperation Rate 1 (COOP): $I / ((I+P)+R+O)$	95.40%
Refusal Rate 2 (REF): $R / ((I+P)+(R+NC+O) + e(UH + UO))$	2.79%
Contact Rate 2 (CON): $(I+P)+R+O / ((I+P)+R+O+NC + e(UH+UO))$	89.53%

⁷ I = Interviews, E = Eligible (temporary code, not part of final calculation), R = Refusal, NC = Non-Contact, NE = Not Eligible, UH= Unknown Eligibility, O=other

Field Outcomes

It is protocol for supervisors to note political, social, or other newsworthy events that occurred during the field period that may have affected the survey. The reports from field are listed below by date and location of the event.

Field Report

Nov 05, 2017

KABUL: More than 2,500 people were killed and wounded in 169 attacks across Afghanistan in October, indicating a 39 percent increase in casualties compared to September. In September, 1,800 people had suffered casualties in 203 attacks that took place in 31 provinces of the country. The casualties in September decreased by 40 percent compared to August. The statistics show attacks in the last month were more deadly as 15 people suffered casualties in each attack, compared to nine casualties in each attack in the previous month.

Helmand: One Afghan National Army (ANA) soldier was killed and five others wounded as a result of Humvee bomb attack in Nawa district of southern Helmand province on Saturday, an official said. Omar Zwak, the governor's spokesman, told Pajhwok Afghan News the (ANA)'s centre in Shorshrak area of the district was hit by an explosives-rigged Humvee tank today at about 9am. According to Zwak the bomber tried to enter into the ANA centre, but before reaching his target he was spotted by security forces. He said one soldier was killed and five others wounded. There has been so far no immediate claim of responsibility for the blast. Earlier on Friday, one border policeman was killed and eight others wounded in a car bomb attack in the capital of southern Helmand province.

GHAZNI: Local officials on Saturday at least 32 [Taliban](#) militants have been killed during clashes with Afghan forces in southern Ghazni and central Kapisa provinces. Ghazni governor's spokesman, Mohammad Arif Noori, told Pajhwok Afghan News that Taliban militants launched a coordinated attack on security posts in Shahbaz Khan area of on the outskirts of the capital of the province Friday night. He said 10 militants were killed and three others wounded in Afghan forces retaliatory attack. The bodies of three Taliban fighters still remained in the incident scene. Around a week and half ago, 10 policemen were killed when the militants stormed the same post. Noori did not provide information about Afghan forces casualties but said the Taliban were pushed back after air force was arrived. However, a resident of the area, Abdullah, said the clash

begun on 10pm and continued until 3am. “We could not sleep entire night, when we went out of home in the morning we saw an empty police post caught fire,” he said. Afghan forces might also suffered casualties. Taliban confirmed the attack. The group’s spokesman, Zabiullah Mujahid said the security post in Shahbaz Khan area was captured by militants last night. He said 12 policemen and one Taliban fighter were killed and seven other policemen wounded during the attack. According to another report, 22 militants were killed in Kapisa province. Provincial police spokesman, Mohammad Ayub Yousufzai said Afghan air forces targeted Taliban in Shator area of Tagab district late on Friday. He said 22 militants were killed in the incident. Niamatullah, a resident of the area also confirmed the attack. But Taliban did not comment yet on the incident so far.

Paktika: Seven [Taliban](#) insurgents have been killed and as many wounded during clashes with security forces in southeastern Paktika province, an official said on Saturday. Brig. Gen. Raham Del, 203rd Thunder Military Corps commander, told Pajhwok Afghan News the militants attacked an Afghan National Army (ANA) convoy in Soraki area of Mata Khan district. Three attackers were killed and several were others wounded, but the security escaped unhurt, he said. Police spokesman Shah Mohammad Aryan said four insurgents were killed and as many wounded when Taliban attacked security check-posts in Piar Kotai area of Argon district on Friday night. Nek Mohammad, a resident of the area, said “Clashes often take place between Taliban and security forces.”

JALALABAD: At least seven Daesh and [Taliban](#) fighters have been killed during a clash between the rival groups in Khogyani district of eastern Nangarhar province, an official said on Saturday. The Nangarhar governor’s spokesman, Attaullah Khogyani, told Pajhwok Afghan News, the two factions clashed in the district on Friday night. He said four Daesh and three Taliban militants were killed and four others on both sides were wounded in the gun-battle. Separately, on Saturday a civilian was injured after being caught in the crossfire between Daesh and government forces in Haska Mena district of the province. The town administrative chief, Saz Wali, said the early morning clash occurred after Daesh militants stormed a check post named Khadi Ghondai in the district. He said security personnel suffered no casualties, but an area resident was severely injured and his condition was said to be critical. He didn’t know about Daesh casualties.

Nov 12, 2017

Parwan: A man accused of illicit relationship with a girl has shot dead her two brothers in central Parwan province while another woman has been killed in northern Samangan province, officials

said on Sunday. Mohammad Masoom Farzai, administrative chief of Jabal Seraj District, said the Parwan incident happened in Tajikan area on Saturday night. He said the accused man who had illegal relation with a girl forced his way into her house and gunned down her two brothers. The assailant managed to flee the area. Police arrested the girl and the murderer's father. The girl confessed she had relation with the man. In Samangan, a 23-year-old young woman was strangled to death in Kachi Monghar village of Hazrat Sultan district, police spokesman Monir Rahimi said. Family violence was said to be a reason behind the murder. The slain woman husband, mother-in-law, and husband's uncle had been arrested by police. Provincial hospital official, Dr. Moqbil Azizi said the woman body had been brought to the hospital with signs of rope around her neck.

KUNDUZ: Seventy-five percent of Dasht-i-Archi district's territory in northern Kunduz province has been under the [Taliban](#) control and the group established their bases there, an official said on Sunday. District Chief Nasruddin Saadi claimed during an exclusive interview with Pajhwok Afghan News around 4,000 Taliban had been active in the district. He said the number of security forces in Dasht-i-Arch was small and there was need for the deployment of more security forces. Tribal elder Farid Ahmad said the Taliban had besieged all government facilities in the district. "The security situation is terrible the Taliban had surrounded government offices and employees could not attend their offices and most of the time they don't go there," he said. Another tribal elder Haji Naeem said security situation was not good in the province and people have been facing huge problems. "People cannot move freely in the city, the government should pay attention to the situation otherwise the district may fall," he believed. The residents of the district held similar views and said the Unity Government was informed about the critical situation of the province but no positive response was received. Saadi demanded the government to address the security challenges of Dasht-i-Archi Kunduz.

Nov 13, 2017

KANDAHAR: At least four US soldiers suffered injuries as the troops convoy was struck by a car-bombing on Monday in the Dand district of southern Kandahar province, an official said. Police spokesman Zia Durrani told Pajhwok Afghan News the car-bombing on foreign forces procession happened in the Ghulaman area at around 3:30pm. He feared casualties in the attack but lacked exact information about dead and injured personnel. Governor spokesman Qudratullah Khoshbakht confirmed the incident and said they had made some calls to get information about casualties but were unsuccessful. The [Taliban](#) claimed responsibility for the attack. The group's spokesman Qari Yousuf Ahmadi said they carried out the attack and inflicted casualties on several foreign forces. Meanwhile, a statement from the [NATO](#) Resolute Support mission, confirmed a

vehicle-born improvised explosive device was detonated at approximately 2 p. m. today. "There were a total of four U. S. service members injured and all are in stable condition in U. S. medical treatment facilities. "The statment ruled out fatalities to Coalition Forces, saying more information might be released as appropriate.

Nov 14, 2017

FARAH: Twenty insurgents, eight security personnel and three civilians have been killed and 21 rebels injured during clashes in the Bala Boluk district and Farah City, the provincial capital of western Farah province, officials said on Tuesday. Maj. Gen. Dawlat Waziri, spokesman for the Ministry of Defence (MoD), said militants stormed security forces check-posts in the Shewan area of Bala Boluk and Khethwan area of Farah City. Eight security forces, 20 assailants were killed, three security forces and 21 assailants were injured in the overnight fire fight, he said. But Police spokesman Iqbal Bahir said five more security forces were killed in militants' attacks in the Kal Kalae area of Bala Boluk district on Monday night. [Taliban](#) spokesman Qari Yousuf Ahmadi said 11 security forces were killed and their check post was captured by the Taliban in the overnight attack. Naseer Ahmad, the resident of Rokan village in Farah City, said two children and their mother was killed when a mortar shell struck their home as a result of Monday night clash. The residents of Rokan village while carrying the coffins of mother and two children rallied against the killing of civilians. Governor spokesman Nasir Mehri said the three civilian were killed as a result of shell fired by security forces. He said the protesters held talks with governor and discuss how to prevent the killing of civilians in the conflict.

Nov 15, 2017

Helmand: Nine [Taliban](#) insurgents have been killed, including a notorious commander, in central Kapisa and southern Helmand provinces, officials said on Wednesday. In Helmand, police spokesman Abdul Salam Afghan told Pajhwok Afghan News that US forces targeted a vehicle carrying militants in Camp Khalid area of Sangin district on Tuesday. Six militants onboard the vehicle were killed and their weapons and ammunition destroyed in the airstrike. [Mullah](#) Jabar, a notorious commander, was among the dead, said Afghan. However, Qari Yousaf Ahmadi, Taliban's spokesman, claimed tribal elders travelling in Sangin were targeted by the US forces and rejected casualties to their fighters. In Kapisa province, three militants were killed and a fourth wounded during a gun-battle between gunmen loyal to a [former jihadi](#) commander and Taliban militants in

Tagab district on Tuesday, police said on Wednesday. Police spokesman Mohammad Ayub Yousafzai said the injured gunman had been shifted to [Kabul](#) for treatment by police.

KUNDUZ: Two Afghan National Army (ANA) soldiers and six [Taliban](#) insurgents have been killed during an overnight clash in an Qala-i-Zal district of northeastern Kunduz province, an official said on Wednesday. Deputy police chief Col. Mohammad Safar Akbari told Pajhwok Afghan News militants attacked security check-post in Afghan-Mazar area on Tuesday night. He said two ANA soldiers, six militants were killed and six soldiers, two policemen and eight rebels wounded. "Taliban wanted to kill all the soldiers manning in check-post and capture it, but could no execute their plan," he said, adding security forces also recovered and defused some land mines in the area. Rahmatullah, an inhabitant of the area, also confirmed the clash between security forces and Taliban lasted for few hours, but was unaware about the casualties. Taliban have so far said nothing about the overnight clash.

Nov 17, 2017

KUNDUZ: Five militants have been killed in a clash with police in the [Imam](#) Sahib district of northern Kunduz province, the Ministry of Defence said on Friday. A statement from the ministry said the encounter happened during an operation against the insurgents in the district late on Thursday. Two fighters were wounded. Kunduz police spokesman Col. Safar Mohammad confirmed the firefight, but said he did not have any information about casualties.

Farah: Three policemen, including a unit commander, have been killed in a clash with insurgents in western Farah province, an official said on Friday. At least nine police personnel were wounded in the gunbattle that erupted in the Shamalgah area on the outskirts of the provincial capital late Thursday night. Police spokesman Iqbal Bahar told Pajhwok Afghan News three policemen, including unit commander, Col Dawood Baqizoy, were killed in the firefight. Nine [Taliban](#) were also killed in the gunbattle, which left another five fighters wounded, he added. Meanwhile, area residents also confirmed the clash. One inhabitant said three policemen lost their lives to the overnight battle. However, he gave no further details. On the other hand, Taliban spokesman Qari

Yousaf Ahmadi said Commander Baqizoy and three other policemen were killed and 10 more injured in the Shamalgah fighting.

Nov 18, 2017

KABUL: Saudi Arabia, [Pakistan](#), [NATO](#) and the United Arab Emirates (UAE) have condemned Thursday's deadly suicide attack in Kabul. At 14 people were killed and as many others wounded when a suicide bomber detonated his explosives near a wedding hall in Lab-i-Jar area in the 4th police district. The Saudi Ministry of Foreign Affairs condemned the suicide attack that resulted in the killing and injuring of a number of people, and offered condolences to the victims' families, the Afghan government and people. In a statement, the ministry wished the wounded a speedy recovery and reaffirming the kingdom's support for the friendly people of [Afghanistan](#) against extremism and terrorism. Pakistan also strongly denounced the bomb attack. "We are deeply grieved at the loss of precious lives in this dastardly terrorist attack," the Foreign Office said. "We express our deepest sympathies and condolences to the bereaved families and pray for the speedy recovery of the injured," a statement from the ministry said. Pakistan reiterated its unequivocal condemnation of terrorism in all forms and manifestations and expressed solidarity with the government and people of Afghanistan in their fight against terrorism. "We particularly feel the pain as a country that has suffered from terrorism. We believe concerted efforts by states, and close cooperation among them is important for eliminating this menace," the statement added. Meanwhile, NATO called the terrorist attack against the political gathering totally unacceptable. The NATO civilian representative office offered its condolences to the families of those killed and wishes a swift recovery to those injured. Meanwhile, the UAE Ministry of Foreign Affairs and International Cooperation also slammed the bombing as a cowardly terrorist act. While expressing solidarity with Afghanistan, it called on the international community to unite to root out terrorism that threatened the security and stability of all countries. The ministry also expressed condolences to the families of the victims, the government and people of Afghanistan and wished the wounded a speedy recovery.

Helmand: Several areas have been claimed cleared of [Taliban](#) militants in Marja district of southern Helmand province as a result of an ongoing military operation, officials say. There has been no resistance from insurgents during the clearing operation codenamed "08," said Maj. Abdul Qader Bahadorzai, spokesman for 215th Maiwand Military Corps. He told Pajhwok Afghan News a number of areas had been purged of militants' presence in the ongoing operation.

Ammunition and food would be supplied to the soldiers in Marja district where no resistance from militants had been reported so far. Meanwhile, a statement from the governor's house said security forces backed by air support had advanced three kilometers inside Dorahi area between Marja and Nad Ali districts. The forces also defused 15 landmines during the operation, the statement said. Ali Ahmad Darwishi, a former provincial council member, said if the government wanted to have successful operation against militants, it should clear 3rd and 4th police districts of Lashkargah. A security source in Nad Ali district said they were lacking personnel, but hundreds of youth in the district were ready to join the forces, but the government had stopped the biometric process.

IV. QUALITY CONTROL

This section provides a description of quality control. Additional data processing checks and hard checks taken to ensure the quality of the report are summarized in this section. This survey had a high level of quality control and oversight which contributes to the overall validity of the data collected.

Field Team

A description of the field team composition such as the number of interviewers by gender, the number of interviewers that have worked on previous D3 projects, and those that are new interviewers to a D3 project are described in Table 6.

TABLE 6: DESCRIPTION OF FIELD

	Female	Male	Total
Number of female/male interviewers	413	688	1101
Number of interviewers previously used in D3 project	413	688	1101
Number of interviewers new to a D3 project	0	0	0

Training

The central training for provincial supervisors was held in Kabul on November 4, 2017 and was led by ACSOR project managers Nazir Ekhlass and Jawed Alkozai. Thirty-four provincial supervisors were trained at the central training in Kabul. Additional provincial level trainings were conducted in all 34 provinces by the trained supervisors.

Topics covered during the training include:

- Proper household and respondent selection
- Review of the questionnaire content
- Proper recording of questions
- Appropriate interviewing techniques
- Proper usage of the contact sheets

The training sessions were conducted successfully, and no issues were reported.

Quality Control Methods – Field Level

When the questionnaires have returned to the ACSOR central office in Kabul they are sorted, and open-end questions are coded by a team of coders familiar with international standards for creating typologies for codes.

The questionnaires are then sent for data entry. ACSOR key-punches all questionnaires on-site to protect the data and closely control the quality of the data entry process. During this process, the keypunching team utilizes logic checks and verifies any errors inadvertently committed by interviewers.

Following the data cleaning process and logic checks of the dataset, ACSOR uses a proprietary program called Hunter that searches for additional patterns and duplicates that may indicate that an interview was not properly conducted by an interviewer.

The Hunter program includes three tests:

1. Equality test – compares interviews for similarities, grouped by interviewer, within sampling point, province, or any other variable. Typically, interviews with an interviewer average of 90% or higher are flagged for further investigation.

2. Non response test – determines the percentage of “Don’t Knows” for each interviewer’s cases. Typically, interviews with 25% or higher Don’t Know responses are flagged for further investigation.
3. Duplicates test – compares cases across all interviewers and respondents to check for similarity rates. This test will flag any pair of interviews that are similar to each other. Typically, any cases that have a similarity of 95% or higher are flagged for further investigation.

Any interview that does not pass Hunter is pulled out for additional screening. If the interview does not pass screening, it is removed from the final database before delivery.

For Wave 38, the Hunter program flagged a total of 537 cases to be removed:

- 8 cases were removed due to over 90% similarity in answers
- 3 cases were removed due to having over 50% non-response
- 526 cases were removed for being over 95% similar in substantive responses (duplicates test).

Quality Control – Double Entry

For the Wave 38 survey, ACSOR randomly selected 1,362 questionnaires of the total 13,366⁸ (15%). These questionnaires were then given to an independent team for entry. Data results from this independent entry were then compared to the primary data set. Discrepancies and errors were identified by data coders. All discrepancies were compared to the fielded questionnaires. The data in the finalized dataset were based on the responses provided in the original questionnaires. The results of double entry showed an overall error rate of .06%, which is comparably low and acceptable for quality control standards.

⁸ Total n size before Hunter deletions and cases were removed due to improper survey administration and misprinted questionnaires.

V. QUESTIONNAIRE

The questionnaire was drafted from client specifications consisting of 31 management questions, 18 demographics questions, and 104 substantive questions. The mean interview length was 33 minutes with a range of 20 to 60 minutes. Topic areas that were addressed in the questionnaire include:

- Security
- Afghan National Security Forces
- NATO/International Forces
- Reconciliation/Reintegration
- Taliban/Da'esh
- Government performance
- Economic conditions
- Dispute resolution
- Perception of countries and organizations
- Migration

VI. OUTLOOK FOR FUTURE STUDIES

The fieldwork for ANQAR Wave 38 proceeded successfully. D3/ACSOR anticipate no difficulties in repeating the study for future waves.
