INTRODUCTION

The Afghanistan Nationwide Quarterly Research (ANQAR) survey was designed to gain a broader understanding of the attitudes, behaviors, and issues that are important to the people of Afghanistan. This report reviews the methodology of the Wave 43 survey conducted in the winter of 2019.

Fieldwork for Wave 44 was conducted by ACSOR for RS/NATO in Afghanistan from May 16-28, 2019. The sample includes a national probability sample of 10,794 Afghans selected at random in all 34 of the country's provinces; and a sample conducted via intercept interviews of 2,796. Respondents were 18 years and older, 65% were male and 35% were female. The survey includes both urban (25%) and rural (75%) households. Unless otherwise noted, all figures in this report represent unweighted results.

EXECUTIVE SUMMARY

The sampling methodology, questionnaire design, field team, and overall field experience are summarized in this report.

- Fieldwork was conducted from May 16-28, 2019. The field team consisted of 1057 trained interviews and supervisors under the management of D3 Systems and ACSOR.
- ANQAR Wave 44 includes a total sample of 13,590 men and women 18 years of age and older in all 34 provinces of Afghanistan. 10,794 interviews were conducted via random walk with male and female respondents and 2,796 interviews were conducted via intercept interviews with males in areas where security or weather restricted random selection interviewing. A full list of the locations for the intercept interviews can be found in Appendix A.
- The sample was stratified by province and urban/rural status using population data released by the National Statistics and Information Authority (NSIA) (2018 - 2019 estimates) of Afghanistan. Additional booster sampling points were distributed to smaller provinces to ensure that the minimum sample size per province was at least 110 interviews. Booster sampling points were distributed in Panjshayr, Nuristan and Nimroz.

- › Replacement draws within the same district originally selected were provided to the field team prior to the launch of fieldwork. In the case when the replacements were exhausted, settlement/nahia level replacements were done in field by supervisors where neighboring accessible settlements were chosen as replacements whenever possible. A full list of the Wave 44 replacements can be found in Appendix B.
- › The sample was 65% male and 35% female. The survey was designed to include 50% male and 50% female respondents, but due to violence, transportation conditions, and local norms female interviewers could not travel to some selected districts. Sampling points that were planned for interviews with women and could not be covered by female interviewers were replaced with male interviews in the same village.
- › The questionnaire consisted of 31 management questions, 18 demographics questions, and 109 substantive questions. Topics included quality of life, security, perceptions of the government, reconciliation, and migration.
- › The mean interview length was 33 minutes with a range of 20 to 55 minutes.
- › Various quality control procedures were employed throughout the project. During field, interviewers were observed by supervisors. Field supervisors also conducted back-checks of interviews. During the data processing phase, a proprietary program, Hunter, was used to search for patterns or anomalies in the data that may indicate an interview was not properly conducted by an interviewer. For the Wave 44 survey, a total of 201 cases were removed from the dataset; 201 cases were removed for being over 95% similar in substantive responses, no cases were removed due to similarities in answers, and no cases was removed for having over 40% don't know or refusal responses.
- › The data were also screened for keypunching errors. ACSOR randomly selected 10% of the survey's questionnaires for double entry. The double punched questionnaires were compared to the originally punched questionnaires. Discrepancies between the two were rectified and the final data files were based strictly on a review of the original questionnaires. The overall error rate for the Wave 44 survey was .14%. The error rate was very low overall, and we have confidence in the fidelity of the keypunched data.

- The Wave 44 survey has a margin of sampling error of ± 0.84 percentage points at the 95 percent confidence level. The overall design effect is 2.04. The complex margin of error is $\pm 1.20\%$.
- For the overall sample, the response rate is 87.15%, the cooperation rate is 96.15%, the refusal rate is 2.21%, and the contact rate is 90.63%.

PROJECT SCHEDULE

Table 1 lists the schedule of major project milestones.

TABLE 1: PROJECT TIMELINE

Project Phases	Start Date	End Date
Translation	May 11, 2019	May 12, 2019
Central Briefing	May 15, 2019	May 15, 2019
Field	May 16, 2019	May 28, 2019
Quality Control during field-work	May 16, 2019	May 28, 2019
Data Processing	May 29, 2019	June 15, 2019

SAMPLE DESIGN

The sample was drawn using a stratified multi-stage cluster design. D3 used the 2018-2019¹ updated figures provided by the National Statistics and Information Authority (NSIA) of the Afghan government. D3 chooses to use this because, similar to the 2010-2011 update, much of the 2018-2019 update is based on data drawn from the Ministry of Rural Reconstruction and Development relying on results from the National Reconstruction Vulnerability Assessment (NRVA) based on a detailed cataloging of households to help inform the updates in a systematic, replicable way. While the proportions by provinces have changed in mostly a uniform, formulaic manner, the additional use of NRVA data adds to the detail of the estimates.

SAMPLING METHODOLOGY

The target population for this survey was a nation-wide poll of Afghans age 18+.

Step 1: Primary sampling units (PSU) were allocated across all of Afghanistan's 34 provinces using proportional stratification. Urban/rural status and province serve as the strata. In field, villages were considered rural while towns, cities and metros were considered urban. Settlements or neighborhoods within randomly selected districts were chosen by simple random sampling.

- Booster interviews (n=88) were added to small provinces to ensure that the minimum sample size per province was at least 110 interviews. Booster interviews were added in Panjshayr (n= 32), Nuristan (n=32) and Nimroz (n=24).

Step 2: Districts were selected via probability proportional to size (PPS) systematic sampling. Districts serve as the primary sampling unit (PSU).

- In situations where the selected district was inaccessible due to security, transportation or weather, intercept interviews were conducted with residents of

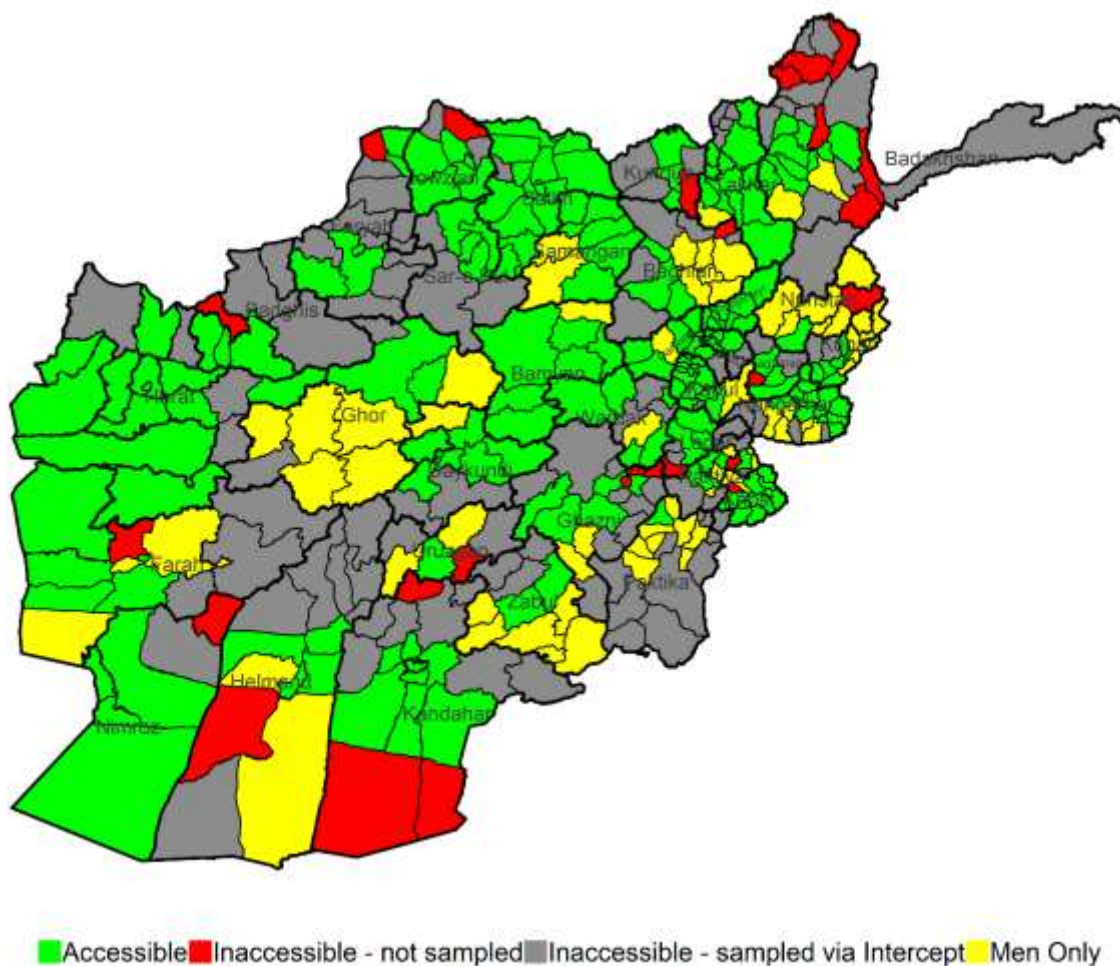

¹ There is no official census of Afghanistan. The National Statistics and Information Authority (NSIA) of the Afghan government has attempted to provide updates since 2003, but their base is influenced by figures from the 1979 census. The NSIA has received support from the UN, the Ministry of Rural Reconstruction and Development, and the World Food Programme to issue updates. D3 completed its review of 2017-2018 updates from the NSIA and feels they are acceptable as replacements for the 2006 estimates.

those districts who were traveling in neighboring districts. Intercept interviews were used in 293 sampling points. These were conducted with male respondents only. A list of the intercept interviews can be found in Appendix A.

The following figure illustrates the accessibility assessment during the month of August, when field work launched. Red districts were not sampled and are completely inaccessible, yellow are accessible to males only, green are completely accessible (to both male and female interviewers), and gray are intercept interviews which targeted completely inaccessible districts that were visited during Wave 44.

FIGURE 1: AFGHANISTAN ACCESSIBILITY WITH INTERCEPT INTERVIEWS

Of the 424² potential primary sampling units in the country, 19% were inaccessible to male interviewers, 39% were inaccessible for female interviewers. Overall, 115 completely inaccessible districts were sampled. These were made accessible to male interviewers by intercept interviews. Including design effects, results have a complex margin of sampling error of +/- 1.20 percentage points at the 95 percent confidence level for the full sample.

Step 3: Selected PSU that were completely accessible were divided into two sampling points of 8: one female and one male. This was done to allow for gender matched interviewing due to cultural constraints and to also obtain a greater geographical coverage within district, and therefore overall.

The **settlements**, within districts, were selected by simple random sampling for each of the two points. Within urban strata, we used neighborhoods (called “nahias” from cities and metros) and towns while in rural strata we used villages. As population data for settlement sizes does not exist, a simple random selection amongst all known settlements was used to select locations. The settlement/nahia served as the secondary sampling unit (SSU).

- Transportation constraints due to bad weather, and instability and frequent fighting in some provinces can cause a sampling point to be adjusted or replaced to keep interviewers out of areas that may be unsafe.
- Replicate draws were provided to the field team prior to the launch of fieldwork. In the case when the replacements were exhausted, settlement/nahia level replacements were done in field by supervisors where neighboring accessible settlements were chosen as replacements whenever possible.
- At the settlement level, 148 of the 1723 sampling points were randomly replaced within the same districts because of security reasons, 67 for transportation difficulties, 32 because they could not be located, and 21 for other accessibility issues. A complete list of replaced sampling points and reasons for replacements can be found in Appendix B.

Step 4: Field managers then used maps generated from several sources to select starting points within each SSU.

² There are 408 districts in Afghanistan; however, Kabul City is composed of 16 nahias leading to 424 primary sampling units used in the survey's sampling frame.

- › In rural areas, we used a system that requires interviewers to start in one of five randomly selected locations (Northern, Southern, Eastern, or Western edges of the rural settlement and Center).
- › In urban areas, because it is more difficult to differentiate neighborhood borders, a random location (Northern, Southern, Eastern, Western or Center) was provided to the interviewer, and they started from an identifiable landmark in the vicinity (ex: school, Mosque, etc.)

Step 5 - A random walk method with a fixed sampling interval was performed from the starting point. For example, selecting every third house on the right in rural areas and every fifth house on the right in urban areas.

Step 6: After selecting a household, interviewers were instructed to utilize a **Kish grid** for randomizing the target respondent³ within the household. Members of the household were listed with their names and their age in descending order and then the respondent was selected according to the rules of the Kish grid.

³ Interviewers are not allowed to substitute an alternate member of a household for the respondent selected by the Kish grid. If the respondent refused to participate or was not available after callbacks, then the interviewer must move on to the next household according to the random route.

TABLE 2: PROVINCIAL POPULATION PERCENTAGE, UNWEIGHTED AND WEIGHTED PERCENTAGE

Province	NSIA Percentage in Population (Total)	Percentage in Unweighted Sample (Total)	Percentage in Weighted Sample (wgt1) ⁴
Kabul (KAB)	16.1%	16.2%	16.2%
Kapisa (KAP)	1.6%	1.6%	1.6%

Uruzgan (ORU)	1.4%	1.2%	1.3%

⁴ 'wgt1' variable in the data set

Province	NSIA Percentage in Population (Total)	Percentage in Unweighted Sample (Total)	Percentage in Weighted Sample (wgt1) ⁴
Ghor (GHO)	2.5%	2.5%	2.5%
Bamyan (BAM)	1.7%	1.6%	1.6%
Panjshayr (PAN)	0.6%	0.8%	0.6%
Daykundi (DAY)	1.6%	1.9%	1.8%
Total	100%	100%	100%

WEIGHTING

The dataset includes two weights.

- “wgt 1” is a post-stratification adjustment performed to match the population’s geographic distribution of Afghanistan. The only target used for this post stratification was Province by Urban/Rural status.
- “wgt 2” is the same as wgt 1 except intercept interviews are not included in the calculations. The use of this weight effectively removes intercepts from the sample allowing for analysis of all interviews collected using random probability sampling methods.

MARGIN OF SAMPLING ERROR AND DESIGN EFFECT

Given that the methodology for this survey is assumed to be a full probability-based sample, weighted data can be used to estimate variance for each statistic. These, in turn, can be used to estimate a design effect for the survey and then to estimate the complex margin of sampling error. Design effect estimates provided in this section account for both the complex sample design as well as the weights.

- The design was stratified by urbanity and province and then clustered by district and settlement.
- The design effect is estimated for five variables Q1, Q2, Q3, Q4 and Q5. In the following tables, we provide design effect estimates for each response category of the key variable through the *survey* package in R.
- In an effort to provide a survey-wide design effect, a “weighted mean” design effect is calculated as average across each response category of the variable when weighted by frequency of response which is then in turn averaged across all five variables.

TABLE 3: DESIGN EFFECT ESTIMATION USING Q1, Q2, Q3, Q4, Q5

q1: Q181 Generally speaking, do you believe the Government of Afghanistan is going in the right direction, the wrong direction, or is in the same place, not going anywhere?

	Frequency	Proportion	Complex SE	Design Effect
Right Direction	4548	33.46%	0.62%	2.35
Wrong Direction	5795	42.64%	0.62%	2.17
Same Place, Not Going Anywhere	3105	22.85%	0.47%	1.72
Refused (vol.)	2	0.02%	0.01%	1.03
Don't Know (vol.)	140	1.03%	0.11%	1.53
Weighted Mean			0.58%	2.12
Total	13590	100.00%		

q2: Q280 How satisfied or dissatisfied are you with the current quality of your life? Are you very satisfied, somewhat satisfied, somewhat dissatisfied, or very dissatisfied?

	Frequency	Proportion	Complex SE	Design Effect
Not Satisfied At All	1335	9.82%	0.36%	1.96
Somewhat Dissatisfied	3239	23.84%	0.51%	1.98
Somewhat Satisfied	6126	45.07%	0.61%	2.02
Very Satisfied	2875	21.16%	0.53%	2.31
Don't Know (vol.)	15	0.11%	0.03%	0.97
Weighted Mean			0.54%	2.06
Total	13590	100.00%		

q3: Q23 Do you believe that the next generation of Afghans (in 10-15 years) will be able to live in peace and security? Do you think it is very likely, likely, not likely, or not likely at all?

	Frequency	Proportion	Complex SE	Design Effect
Not Likely At All	1130	8.32%	0.29%	1.52
Not Likely	3574	26.30%	0.52%	1.90
Likely	6323	46.53%	0.55%	1.67
Very Likely	2367	17.42%	0.48%	2.16
Refused (vol.)	3	0.02%	0.01%	0.97
Don't Know (vol.)	192	1.42%	0.13%	1.62
Weighted Mean			0.50%	1.81
Total	13589	100.00%		

q4: Q337 How would you describe the economy for you and your community since 5 years ago? Have things gotten better, gotten worse or remained the same?

	Frequency	Proportion	Complex SE	Design Effect
Gotten Better	3738	27.51%	0.58%	2.27
Gotten Worse	5846	43.02%	0.64%	2.29
Remained The Same	3972	29.23%	0.51%	1.69
Refused (vol.)	1	0.01%	0.01%	1.11
Don't Know (vol.)	33	0.24%	0.05%	1.15
Weighted Mean			0.58%	2.11
Total	13590	100.00%		

q5: Q289 Has your family's economic situation gotten better, gotten worse or stayed the same compared to 12 months ago?

	Frequency	Proportion	Complex SE	Design Effect
Gotten Worse	5092	37.47%	0.62%	2.22
Stayed The Same	5185	38.15%	0.58%	1.97
Gotten Better	3268	24.05%	0.53%	2.12
Don't Know (vol.)	45	0.33%	0.06%	1.55
Weighted Mean			0.58%	2.10
Total	13590	100.00%		

A survey wide design effect and margin of error is calculated as the average design effect across these five variables. The survey wide design effect is 2.04.

Assuming simple random sample with $n=13,590$ $p=.5$, at the 95% CI level, a conservative estimate of the margin of error for the survey is 0.84%.

Accounting for the complex design through the design effect estimate of 2.04, $p=.5$ at the 95% CI level, the complex margin of error (CMOE) is 1.20%.

Design effect estimates were also calculated at the provincial level. Detailed calculations can be located in the document titled ANQAR W44 CMOE Provincial v1 and a summary of the provincial level design effects and complex margin of error can be found in the document titled ANQAR W44 DEFF Summary v1.

FIELD IMPLEMENTATION

The following section reviews the contact procedures, the sample disposition and field outcomes.

CONTACT PROCEDURES

After selecting a household, interviewers were instructed to utilize a Kish grid for randomizing the target respondent within the household. Members of the household were listed with their names and age in descending order. The Kish grid provides a random selection criteria based on which visit the household represents in his or her random walk and the number of inhabitants living in the household.

Under no circumstances were interviewers allowed to substitute an alternate member of a household for the selected respondent. If the respondent refused to participate or was not available after three call-backs, the interviewer then moved on to the next household according to the random walk.

Typically, interviewers were required to make two call-backs before replacing the household. These call-backs are made at different times of the same day or on different days of the field period, in order to provide a broader schedule in which to engage the respondent. Due to security-related concerns, the field force has had difficulty meeting the requirement of two call-backs prior to substitution in many rural areas.

In this survey, while interviewers were able to complete some call-backs, the majority of the interviews were completed on the first attempt:

- First contact: 98.8%
- Second contact: 1.1%
- Third contact: .2%

SAMPLE DISPOSITION

This section describes the sample disposition which is another diagnostic tool to understand the validity of the sample. Final disposition codes, call outcome rates, and response rates contribute to an understanding of the presence of potential survey error.

This section contains:

- › A detailed and comprehensive set of survey dispositions recoded into the six major types of American Association of Public Opinion Research (AAPOR) survey case dispositions.
- › The formulas for calculating response rates, cooperation rates, and contact rates.
- › A report of the final outcome rates for the evaluation of this survey according to the AAPOR Standards for Minimal Disclosure requirements (Part III of the Code of Professional Ethics and Practices).

RATE CALCULATIONS

The American Association of Public Opinion Researchers (AAPOR) publishes four different types of rate calculations used in AAPOR reporting (response rates, contact rates, cooperation rates, and refusal rates). D3 and ACSOR use AAPOR's Response Rate 3, Cooperation Rate 1, Refusal Rate 2, and Contact Rate 2 as their standards. Intercept interviews are treated the same as standard interviews for the purposes of calculating response rates.

Acronyms used in the formulas are below:

I	=	Complete Interview
P	=	Partial Interview
R	=	Refusal and break-off
NC	=	Non-contact
O	=	Other
UH	=	Unknown if household/occupied household unit
UO	=	Unknown, other
e	=	Estimated proportion of cases of unknown eligibility that are eligible

$$\text{Response Rate 3} = \frac{I}{(I + P) + (R + NC + O) + e(UH + UO)}$$

$$\text{Cooperation Rate 1} = \frac{I}{(I + P) + R}$$

$$\text{Refusal Rate 2} = \frac{R}{(I + P) + (R + NC + O) + e(UH + UO)}$$

$$\text{Contact Rate 2} = \frac{(I + P) + R + O}{(I + P) + R + O + NC + e(UH + UO)}$$

FINAL DISPOSITION CODES

The survey cases are divided into six main types of AAPOR disposition groups: completed interviews, partial interviews, cases of unknown eligibility, non-contacts, refusals, and cases of ineligible interviews. Table 4 provides the final disposition classifications.

TABLE 4: INTERVIEW STATUS: FINAL DISPOSITION CODES AND DEFINITIONS

ACSOR Code	AAPOR Code	Description	Totals
Completed Interviews			
1	1.0/1.10	Interview was successfully completed	13792
Partial Interviews			
10	1.200	During interview, selected respondent refused (General)	37
11	1.200	During interview, selected respondent was not feeling informed to answer the questions	36
12	1.200	During interview, selected respondent got angry because of a question	17
13	1.200	During interview, selected respondent preferred head of household be interviewed	23
14	1.200	During interview, selected respondent was in a hurry/no time	24
Total Partial			137
Unknown Eligibility			
20	3.130	No answer at door	337
21	3.200	No adults (18+) after three visits	329
22	3.170	Unable to access building or house	57
23	3.210	Outright refusal at the door	470
Total Unknown Household			1193
Non-contacts			
24	2.210	Selected respondent never available for interview	111
25	2.250	Selected respondent long-term absence for the fieldwork period	191
Total Non-contacts			302

ACSOR Code		AAPOR Code	Description	Totals
Others				
26		2.300	Selected respondent not allowed to participate in the survey	46
35		2.310	Selected respondent deceased	0
36		2.320	Selected respondent physically or mentally unable to complete the interview	16
37		2.332	Selected respondent unable to complete interview in languages available	3
90		4.900	Other	0
Total Others				65
Refusals				
30		2.11	Selected respondent refuses (General)	136
31		2.11	Selected respondent not feeling informed to answer the questions	52
32		2.11	Selected respondent got angry because of the subject matter	23
33		2.11	Selected respondent prefers head of household to be interviewed	51
34		2.11	Selected respondent in a hurry/no time	88
Total Refusals				350
Not Eligible				
40		4.700	Does not meet screening criteria/not eligible for interview	0
41		4.500	Non-residential (business)/abandoned home	169
Total Not Eligible				169
Total		Total Sampled Households		16008

The response rate is the number of complete interviews divided by the number of interviews plus the number of non-interviews plus all cases of unknown eligibility. The cooperation rate is the proportion of all cases interviewed of all eligible participants ever contacted. The refusal rate is the proportion of all cases in which a participant refuses to do an interview, or breaks-off an interview of all potentially eligible cases. The contact rate measures the proportion of all cases in which the participant responsible and associated with the provided phone number was reached by the survey. Table 5 provides

the following outcome rates for the survey: the response rate, cooperation rate, refusal rate, and contact rate.⁵

TABLE 5: FORMULAS AND RATES⁶

Disposition Rate Formulas	Percent
Response Rate 3 (RR): $I / ((I+P) + (R+NC+O) + e*(UH+UO))$	87.15%
Cooperation Rate 1 (COOP): $I / ((I+P)+R+O)$	96.15%
Refusal Rate 2 (REF): $R / ((I+P)+(R+NC+O) + e(UH + UO))$	2.21%

⁵ D3 uses the rates published by AAPOR; citation is: The American Association for Public Opinion Research. 2009. *Standard Definitions: Final Dispositions of Case Codes and Outcome Rates for Survey*. 6th edition.

⁶ I = Interviews, E = Eligible (temporary code, not part of final calculation), R = Refusal, NC = Non-Contact, NE = Not Eligible, UH= Unknown Eligibility, O=other

FIELD OUTCOMES

It is protocol for supervisors to note political, social, or other newsworthy events that occurred during the field period that may have affected the survey. The reports from field are listed below by date and location of the event.

19-May-2019

Takhar: At least nine people have been killed and seven others wounded during a clash between an illegal armed commander and residents of the Rastaq district of northern Takhar province, an official said on Sunday.

Police spokesman Khalilullah Asir told Pajhwok Afghan News the clash between commander Mohammad and area people happened in Gazir locality of the district late on Saturday night. He said: “The clash occurred when people stormed Mohammad arrived in the area after a long time.” Asir added nine people, including the commander and his two bodyguards were killed and seven others wounded.

Security forces had reached the site and arrested two individuals in connection with the incident, the police spokesman concluded.

But Shakoorullah, a resident of the district bazaar, told Pajhwok more than 10 people had been killed. “Security forces have been unable to reach the area in time.”

19-May-2019

Helmand: At least five civilians have been killed and 10 others wounded as a result of airstrikes in the Greshk district of southern Helmand province, sources said on Monday.

Mohammad Ibrahim, a resident of Zambly area, told Pajhwok Afghan News at Emergency Hospital in Lashkargah City that three homes came under attack at around 4:00am.

“My house was also struck. Three members of my family were killed and as many others wounded,” said Ibrahim, seeking justice for the victims.

Janan, another resident of the locality, said: “My house also came under attack. Two of my family members were killed and four injured.”

Abdul Hakim, also an inhabitant of Zambly area, told Pajhwok the airstrike destroyed his house and injured three of his relatives.

According to information from locals, children and **women** were also among the casualties.

Omar Zwak, the governor’s spokesman, said three civilians were killed and eight others wounded in Zambly area. He had no information on how the casualties happened. Maj. Abdul Qader Bahadorzai, spokesman for the 215th Maiwand Military Corps, said foreign forces conducted airstrikes in Greshk, Marjeh and Musa Qala district on Sunday night. He said 27

militants were killed and several hideouts destroyed. But Bahadorzai denied civilians had suffered no casualties in the overnight strikes.

In a statement the provincial police headquarters said foreign forces targeted landmine and a suicide vest-making factory in the Loymanda area of Kajaki district.

The factory was completely destroyed and three militants killed the statement added.

On the other hand, **Taliban** spokesman Qari Yousaf Ahmadi said that foreign troops conducted air raids on civilian homes in the Sayedan area of Greshk district.

He said six people were killed and 10 others wounded, Children and women were among the casualties, Ahmadi claimed.

20-May-2019

Kandahar: Police in southern Kandahar province have killed three attackers after a clash.

Two attackers stormed a police patrol in the 11th police district of Kandahar City. Policemen shot dead one assailant and the second managed to escape.

Police spokesman Jamal Barakzai told Pajhwok Afghan News the fleeing attacker was also shot dead in the 12th police district. He said police suffered no casualties.

In a similar incident, a third assailant was gunned down by police in **Kabul** Shahi area of the 1st police district, the spokesman added.

Targeted killings have increased in Kandahar province during the holy month of **Ramadan**. Mostly police and security personnel are being targeted.

21-May-2019

Paktia: Two Afghan National Army (ANA) soldiers were wounded as result of landmine explosion in the capital of southeastern Paktia province on Tuesday, an official said.

Police spokesman Sardar Wali Tabasum told Pajhwok Afghan News that a blast took place on ANA pick-up in Khost-i-Pul area of Gardez City, the provincial capital at around 12pm.

He said two ANA soldier were wounded in the blast.

Mohammad Yousaf, a resident of the area, without providing more information said the blast was so powerful. More details to follow.

25-May-2019

Nangarhar: Three people were wounded when a magnetic bomb affixed to a provincial council member's vehicle went off in eastern Nangarhar province on Saturday morning, an official said.

Police spokesman Farid Khan told Pajhwok Afghan News the blast happened in the Talashi square of Jalalabad city, the provincial capital, at around 9:30am. He said the sticky bomb was attached to Qahar Qadir's vehicle but he was not in the vehicle. Three people were slightly injured the blast and shifted to hospital, Farid Khan said. Meanwhile, Gulzadah Sangar, Nangarhar zonal hospital spokesman, told Pajhwok that they had received three injured people from the scene. He said the injured were in stable condition and were under treatment.

27-May-2019

Kabul: At least 10 people, including eight employees of the Ministry of **Haji** and Religious Affairs (MoHRA), were wounded when the vehicle they were travelling in struck a roadside bomb in Kabul on Monday, officials said.

Nasrat Rahimi, spokesman for the Ministry of Interior (MoI), told Pajhwok Afghan News the explosion took place in limits of the 2nd police district of Kabul at around 7:45am.

A security official, who wished to go unnamed, said the blast occurred when explosives attached to a motorbike went off in Dahna-i-Bagh locality. The explosives were detonated when the MoHRA vehicle was passing through the area.

He said two shopkeepers and eight employees of the MoHRA were wounded in the blast. There was no immediate claim of responsibility for the attack.

28-May-2019

Ghor: At least 16 civilians and five policemen have been killed and 15 others wounded in **Taliban** assaults in western **Ghor** province.

Residents and officials said on Tuesday the incidents took place in Shabshudagi and Bykab villages on the outskirts of Ferozkoh -- the provincial capital -- late on Monday night.

Mohammad Ibrahim Mowahid and Abdul Hakim, both residents of the area, told Pajhwok Afghan News the insurgents showed no mercy to the inhabitants.

Innocent civilians including children were killed, they alleged, putting the toll at 16 dead and more than 20 others wounded.

Abdul Basir Qaderi, a member of the provincial council, said 16 civilians, including a woman and a child, were killed. He also verified the killing of five policemen.

About 16 civilians were wounded during the overnight attacks. Without giving exact figures, he said the militants also suffered casualties in the clash.

He warned the provincial capital could fall to the Taliban if the government did not take steps in time to keep the militants at bay.

Abdul Hai Khatibi, the governor's spokesman, told Pajhwok that both sides had suffered casualties. However, he did not have exact figures.

QUALITY CONTROL

This section provides a description of quality control. Additional data processing checks and hard checks taken to ensure the quality of the report are summarized in this section. This survey had a high level of quality control and oversight which contributes to the overall validity of the data collected.

FIELD TEAM

A description of the field team composition such as the number of interviewers by gender, the number of interviewers that have worked on previous D3 projects, and those that are new interviewers to a D3 project are described in Table 6.

TABLE 6: DESCRIPTION OF FIELD TEAM

	Female	Male	Total
Number of female/male interviewers	395	662	1057
Number of interviewers previously used in D3 project	18	20	38
Number of interviewers new to a D3 project	377	642	1019

TRAINING

The central training for provincial supervisors was held in Kabul on May 15, 2019 and was led by ACSOR project managers Nazir Ekhlass and Jawed Alkozai. Thirty-four provincial supervisors were trained at the central training in Kabul. Additional provincial level trainings were conducted in all 34 provinces by the trained supervisors.

Topics covered during the training include:

- Proper household and respondent selection
- Review of the questionnaire content
- Proper recording of questions
- Appropriate interviewing techniques
- Proper usage of the contact sheets

The training sessions were conducted successfully, and no issues were reported.

QUALITY CONTROL METHODS – FIELD LEVEL

When the questionnaires have returned to the ACSOR central office in Kabul they are sorted, and open-end questions are coded by a team of coders familiar with international standards for creating typologies for codes.

The questionnaires are then sent for data entry. ACSOR key-punches all questionnaires on-site to protect the data and closely control the quality of the data entry process. During this process, the keypunching team utilizes logic checks and verifies any errors inadvertently committed by interviewers.

Following the data cleaning process and logic checks of the dataset, ACSOR uses a proprietary program called Hunter that searches for additional patterns and duplicates that may indicate that an interview was not properly conducted by an interviewer.

The Hunter program includes three tests:

1. Equality test – compares interviews for similarities, grouped by interviewer, within sampling point, province, or any other variable. Typically, interviews with an interviewer average of 90% or higher are flagged for further investigation.
2. Non response test – determines the percentage of “Don’t Knows” for each interviewer’s cases. Typically, interviews with 25% or higher Don’t Know responses are flagged for further investigation.

3. Duplicates test – compares cases across all interviewers and respondents to check for similarity rates. This test will flag any pair of interviews that are similar to each other. Typically, any cases that have a similarity of 95% or higher are flagged for further investigation.

Any interview that does not pass Hunter is pulled out for additional screening. If the interview does not pass screening, it is removed from the final database before delivery.

For Wave 44, the Hunter program flagged a total of 201 cases to be removed:

- 201 cases were removed for being over 95% similar in substantive responses (duplicates test).

QUALITY CONTROL – DOUBLE ENTRY

For the Wave 44 survey, ACSOR randomly selected 1,392 out of questionnaires of the total 13792 (10.1%). These questionnaires were then given to an independent team for entry. Data results from this independent entry were then compared to the primary data set. Discrepancies and errors were identified by data coders. All discrepancies were compared to the fielded questionnaires. The data in the finalized dataset were based on the responses provided in the original questionnaires. The results of double entry showed an overall error rate of .14%, which is comparably low and acceptable for quality control standards.

QUESTIONNAIRE

The questionnaire was drafted from client specifications consisting of 31 management questions, 18 demographics questions, and 104 substantive questions. The mean interview length was 33 minutes with a range of 20 to 55 minutes. Topic areas that were addressed in the questionnaire include:

- Security
- Afghan National Security Forces
- NATO/International Forces
- Reconciliation/Reintegration
- Taliban/Da'esh
- Government performance
- Economic conditions
- Dispute resolution
- Perception of countries and organizations

› Migration

OUTLOOK FOR FUTURE STUDIES

The fieldwork for ANQAR Wave 44 proceeded successfully. D3/ACSOR anticipate no difficulties in repeating the study for future waves.

APPENDICES

APPENDIX A

LIST OF INTERCEPT INTERVIEWS FOR ANQAR WAVE 44

Sampling Point	Province	District
255	Kabul (KAB)	Musahi
